Universities

Ensuring ease, security and mobility for both staff and students

BYO Devcice

Previously it has been difficult for students to connect to a university printer from a personal device such as a laptop, iPad or phone. They were presented with obstacles from network selection, server accessibility, to printer driver downloads. PaperCut Mobility Print has allowed print set up to become self-serve for students, allowing them to print from their BYOD or mobile devices, removing hurdles for many students wishing to connect to campus printers.

IT Security and Simplicity

Securing data and keeping printing confidential is paramount to the IT department for the university staff and its students. PaperCut MF is built with both security and privacy in mind with document encryption and through secure print release is only visible to its intended recipient. Furthermore it has the added benefit of minimising waste and reducing costs which goes towards the universities sustainability goals. This provides peace of mind for the IT Department and with Print Deploy, automates the administrative and time consuming task of setting up print queues and deploying print drivers for university staff members.

Easy User Management

Cilantro provides an integration for universities to connect payment gateways with PaperCut MF so that adding money to accounts becomes simple and streamlined. It allows students to access their account at any time via a web portal or at a kiosk, removing the need for staff assistance. As this system is so intuitive, this reduces the number of support calls, freeing IT staff to perform more productive tasks.

We work with you...

Working in direct consultation with our reseller partners, we've created bespoke integrations to ensure that PaperCut MF can maximise the benefits to a University.

Our development team has integrated Cilantro with popular University Payment Gateways like Xetta, PayPal, BPOINT, CommWeb and Taco's own Payrika payment platform. These integrations merge disparate fund accounts into one centralised digital wallet that can be utilised across shared facilities. This makes it simple for administrators to track transactions and for students and their parents to top-up accounts.

Our dev team is happy to work alongside resellers to ensure that University Payment Gateways can be integrated with PaperCut MF, allowing any University to take full advantage of PaperCut's power.

Products Used

PaperCut MF

PaperCut's flagship print management software, PaperCut MF offers the flexibility to meet the challenges of the university environment. Take advantage of detailed user controls, reporting, intuitive print deployment, and so much more.

PaperCut MobilityPrint

PaperCut Mobility Print is a cutting-edge, crossplatform cloud print solution that empowers users to print from their own devices (BYOD) providing flexibility to students whether they use laptops, smart phones or tablets.

cilantro

Taco's in-house connector, Cilantro, is the secret ingredient that brings everything together. Use Cilantro to integrate PaperCut MF with popular payment gateways and more.

Cartadis

Cartadis offers a range of kiosks and terminals that can form the perfect payment and account reload stations for universities. Functionality can also include on-demand student creation and pay-per-use services

payrika

Payrika is Taco's own secure online payment gateway using the Cilantro portal. It allows users to seamlessly top up their PaperCut MF account via the online portal. *Only available in Australia

Third-Party Connectivity Benefits

Universities work more efficiently when systems work together. At Taco, our driving vision is creating truly connected university environments. By integrating disparate systems, we give Universities the ability to allow large groups of students to access diverse facilities from one shared account. Cilantro connects the PaperCut wallet to the University Payment Gateway such as Xetta, PayPal, BPOINT, CommWeb and Payrika, so charges can be tracked and funds stored in a single digital wallet.

PaperCut Mobility Print allows users to easily connect to any device, including laptop, tablet, iPad or smart phone to the printer, regardless of their operating system. This allows them to seamlessly and securely print via email or cloud, providing a user friendly experience.
