

## EzeScan Compressor for PaperCut MF

Make document compression  
quick and easy

**EzeScan's compressor** compliments the experience of PaperCut MF scan actions on the MFD to allow users to initiate the capture of business documents. The solution significantly reduces scanned file sizes and streamlines scanning documents whilst providing flexibility in document output file types.

### Why EzeScan Compressor?

EzeScan Compressor captures unstructured hard-copy documents and converts them into electronic format using PaperCut MF as the digital on ramp. Documents are scanned, then processed and automatically routed to its respective output folder and this can also then be uploaded to the third party management system using the Cilantro connector. The solution is cost-effective and is capable of delivering impressive productivity gains.

v1.0

## Efficiency

EzeScan Compressor allows users to quickly scan documents to a folder utilising PaperCut MF at the MFD. The solution compresses file sizes by up to 75%, increasing staff productivity and reducing the load on on-prem servers. Documents are captured and stored in black and white, with 200 x 200 DPI. If documents are required to be captured and stored in colour, EzeScan Compressor can still shrink file sizes by up to 50%. The solution provides a high quality Optical Character Recognition (OCR) engine, which delivers accurate searchable PDFs, further increasing staff productivity.

## Flexible

EzeScan Compressor gives users the ability to scan to different file types, including compressed PDF, XLS (Excel Spreadsheet) or DOC (Word Document) formats. Add Cilantro to reduce double handling of data and add functionality. Cilantro can integrate the EzeScan compressor to a number of applications, including practice management systems and accounting systems, to transform businesses by connecting systems to enhance productivity, accuracy and allow for efficiency gains throughout the organisation.

## Seamless

EzeScan Compressor does its magic in the background, without the need for user intervention. The solution builds on PaperCut MF's embedded scanning and offers a seamless integration which significantly lowers the size of grayscale and black and white scans. This has been achieved by building a middle-ware piece which receives the pdf scans from the MFD. It then automatically compresses the document on the fly and routes it to a nominated folder. Using the OCR engine, OCR tasks run uninterrupted in the background while the users can continue scanning the next batch of documents.
