

cPad

Touch screen terminal offering full device functionality for printers and MFPs

The cPad is a versatile and intuitive touchscreen control terminal, to enhance copying and printing processes. Offering streamlined functionality to match its intuitive and ergonomic aesthetic, the cPad allows users to access their accounts with a simple passcode or ID card. The vibrant display allows one or more documents to be selected from the queue to print with the touch of a finger.

Features & Benefits

- Powerful touchscreen solution for network authentication and print release.
- Brings full functionality to the printer that doesn't support embedded software.
- Supports manual and external input devices for user data entry and job selection.
- Compatible across most major brands and models of devices.
- Personalised interface for the user authenticated to display credit value, quotas and pending prints.
- Stylish design and stable operating system.
- Customise the branding to include company logos and colour schemes.

The cPad is an external network terminal, fitted with a touch screen, intended to print job release from any printer or MDP. Copies, prints and scans are recorded and uploaded to PaperCut.

How Does it Work?

When a user approaches the cPad connected to a Multifunction device, they are presented with two authentication options:

Login via Touchscreen

Users can enter their Unique ID or Username/Password via the keyboard located on the cPad touchscreen.

Card solution

The cPad can be fitted with a magnetic, contactless RFID or barcode card readers.

In both scenarios the cPad authenticates and connects the user to the cost recovery solution located on the server, allowing the user to view print jobs, select and release print jobs, or make copies directly on the cPad screen.
